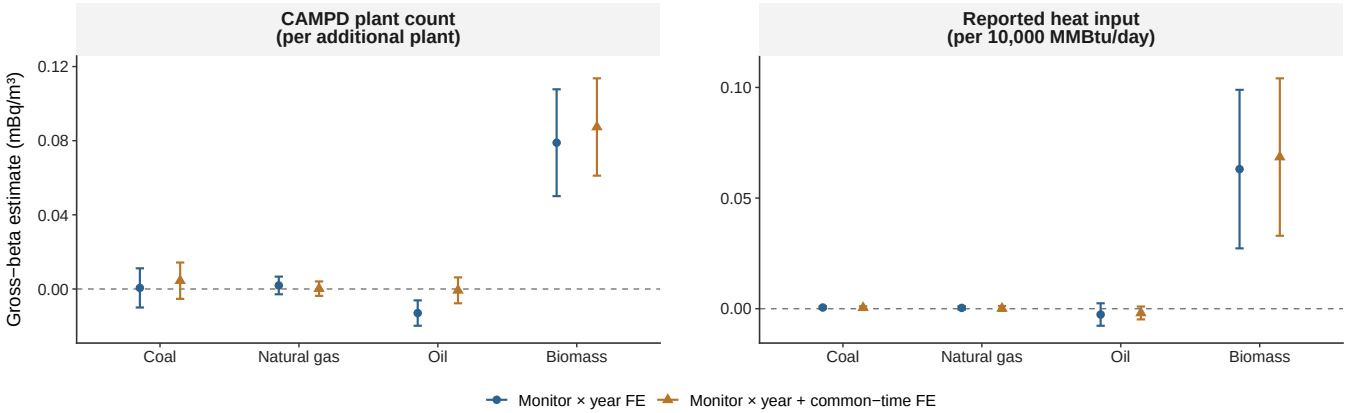
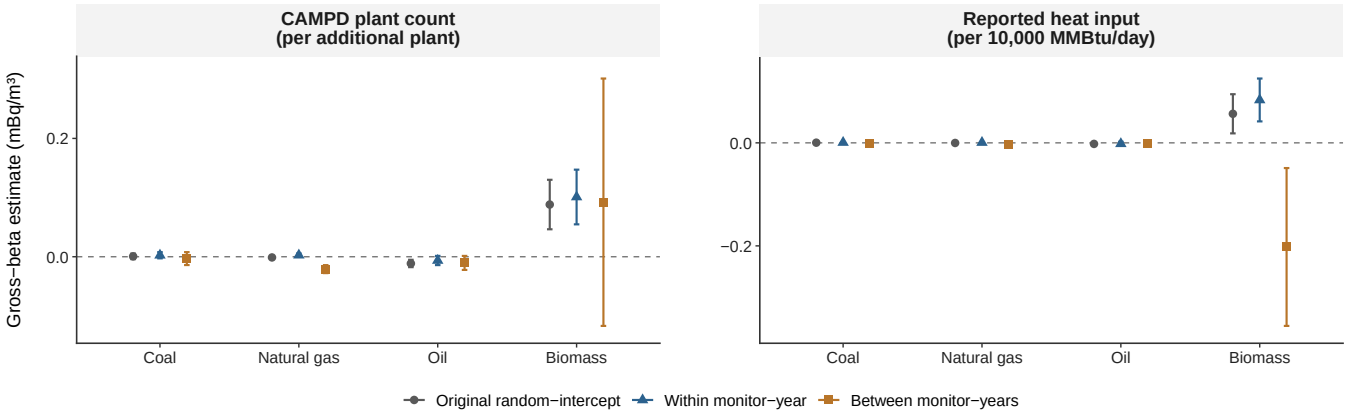
Internal validity and robustness

20 km upwind exposure; shared baseline sample−median wind; 95% confidence intervals

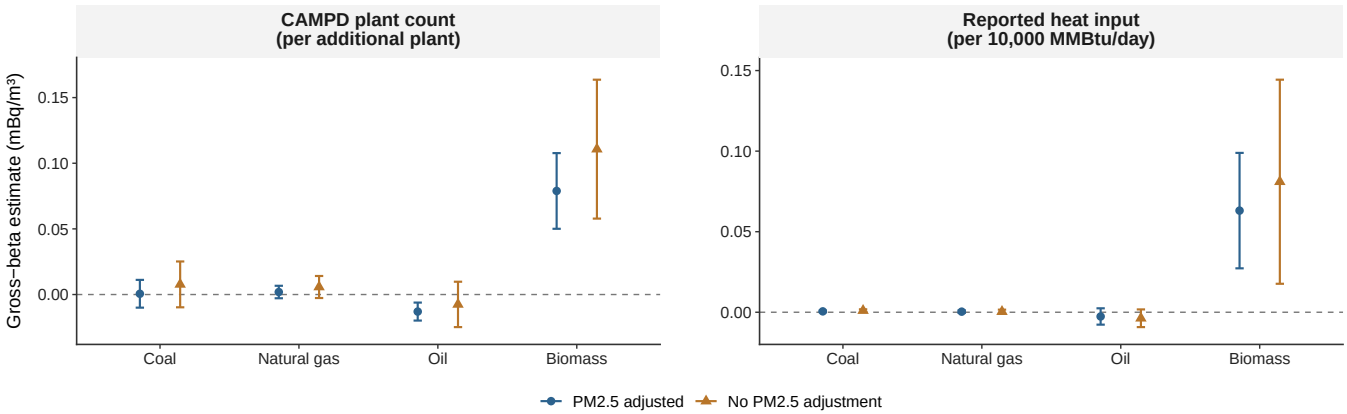
a Common−time fixed effects



b Within− and between−monitor−year decomposition



c PM2.5 adjustment



Count: 3.154 m/s (all fuels). Heat: coal 3.153, gas 3.139, oil 3.136, biomass 3.154 m/s.
Reference medians are shared across a−c; model−specific sample sizes are provided in Source Data.
